Web Editor Control 5 Features

Web Editor Control 6 Release Notes

These release notes provide extra information about new features, enhanced features, new APIs, and new keyword lists in Web Editor Control 6 and 5.

New & Improved in Web Editor Control 6

Web Editor Control 6 adds enhanced features to Web Editor Control 5 and resolves some problems of previous versions.

To check whether Web Editor Control 6 has been successfully installed, select the Help>About Web Editor Control... menu command. "Web Editor Control 6.x.x.x" on the title bar of the pop-up window indicates the installation has been completed.

New Features of Web Editor Control 6

Feature	Description
Image pasting	With Web Editor Control 6, you can paste an image you've added to the clipboard. [Menu] Edit > Paste Image
PNG support	You can paste an image in PNG file format.
SymbolDlgTab added	You can specify the tab order for the symbol dialog box in the UI section of the Initialization File Generator.
ImeMode added	You can set the language in the Edit section of the Initialization File Generator.
Unicode auto conversion	When you import or copy a document containing Unicode, you can convert it automatically to the decimal scale.
Easy line break insertion	You can set an option so that the Enter key on your keyboard inserts a line break (<br) tag instead of starting a new paragraph.
RemoveClipboardWORDTag added	You can set an option so that Microsoft Word-specific tags are automatically deleted.

Improved Features of Web Editor Control 6

Feature	Description
Improved filter system	Web Editor Control 6 includes more powerful filters and lets you import HWP, DOC, XLS, PPT, and GUL files in the latest version.
User authentication	User authentication completes with less time.
Polished toolbar design	Toolbars were modified with new design and colors.
Improved DoCommand	Extended from the DoCommand API which had just one keyword factor, DoCommandEx in Web Editor Control 6 lets you use more than one keyword in commands.
NamoMime	You can handle multiple languages for UTF-8 more easily with NamoSmime Utilities.
Enhanced copying	You can copy CSS styles and formatting to the clipboard.
Empowered CSS editing	You can edit CSS with an improved WYSIWYG (What You See Is What You Get) interface.

New APIs in Web Editor Control 6

API Name	Category	Description
GetDocumentSizeEx	Method	Gets the total size of the current document including its inserted files.
GetLocalFileSize	Method	Gets the size of files in the local system.
SaveFileEx	Method	Saves a resource file inserted into the document.
PrintToImage	Method	Saves the current file in a BMP file format to the local system or prints it.
DoCommandEx	Method	Executes a command with the specified factor.
UseNamoNet	Property	Specifies whether or not to use NamoSnet.dll for a network module.
OnTabChanged	Event	Invoked when an Web Editor Control tab is selected.

Web Editor Control 5

New Features of Web Editor Control 5

Feature	Description
Viewing page breaks	Web Editor Control 5 can display lines in the Edit window where page breaks will fall when a document is printed. [Menu] View > Page Breaks
Page Layout view	Page Layout shows users how a document will look when printed. [Menu] View > Page Layout
Spell checking	Check Spelling suggests corrections for misspelled words. This feature requires Microsoft Word 97 or newer to be installed on the user's computer. A user dictionary function is not provided. [Menu] Tools > Check Spelling...
Initialization File Generator (for administrators)	Administrators can now generate or modify initialization files using a GUI. [Menu] Tools > Initialization File Generator
DOM interface	Users can access the HTML source of Web Editor Control with script. This feature requires Internet Explore 4.0 or newer. Refer to the Create DOM API document for details.
Show/Hide Ask Dialog (for administrators)	Some dialog boxes can be suppressed from display and answered automatically according to values in the initialization file. (Refer to Initialization file definition for details.)
Color picker customization (for administrators)	You can define custom colors for the Color Picker using the initialization file generator. [Menu] Tools > Initialization File Generator
HTML dialog	You can create a dialog box needed to be customized with HTML. Refer to FAQ for details.

PrintHeader Properties	Document headers can be printed or previewed. Refer to PrintHeader API for details.
------------------------	---

Improved Features of Web Editor Control 5

Feature	Description
Saving custom colors	Users can save a selected custom color by clicking Add to Custom Colors in the Color Picker dialog box.
FTP uploading	You can upload your files using FTP service more easily. Refer to FtpUploadFiles API for details.
